

## CMMS

Computerized  
Maintenance  
Management  
Systems

With WennSoft solutions, integration is never an issue. We provide one platform to manage costing, tracking, budget to actual, inventory management, purchasing, maintenance planning and recurring work orders.

For more information, please visit [www.wennsoftpublicsector.com](http://www.wennsoftpublicsector.com).

**You maintain infrastructure to ensure quality services for your constituents. But despite budgeting and planning for improvements, things break.**

## Common Pain Points

### Poor Resource Balancing

It can be difficult to balance staff or equipment work load. This can result in an inability to convince others of additional staffing needs to accomplish tasks.

### Balancing Emergencies with Day-To-Day Tasks

Emergencies take precedence over preventative maintenance tasks. Later, the department may be unable to illustrate why preventative maintenance was not accomplished.

### Lack of Enterprise Tools

Organizations often struggle to coordinate repair efforts across the enterprise. Without coordination, the same street can be torn up multiple times.

### Limited Reporting

Even though a great deal of information is entered, it's not easily available in a desired format.

### Lack of Integration to Financial Information

Many work order systems capture data but financial data is often stored in another system in another department. Reports provide some data but this data isn't integrated with other system data to provide a complete picture.

### Limited Integration to Other Systems

Organizations invest heavily in enterprise systems including CRM, GIS, content management, SCADA, 311, call centers, pavement management and modeling. The inability to integrate these systems results in limited functionality.

### Duplicate Data Entry

Inefficient processes require duplicate data entry, resulting in inefficiencies and inaccuracies.

## WENNSOFT CAN HELP

WennSoft solutions manage preventative and reactionary work orders and track associated costs. Multiple field tools enable the mobile worker to schedule and prioritize, reserve equipment, record work completed, generate invoices, post to the general ledger and compare against budget.

The one platform WennSoft solution allows you to:

- Balance staff and equipment work load
- Coordinate efforts among departments
- Provide appropriate information to elected officials, executives, management, operations staff and constituents
- Integrate to other key enterprise solutions
- Satisfy enterprise reporting requirements (e.g. departmental, governing boards, public commissions, state and federal agencies)
- Leverage your investments in Microsoft technology for reporting and analysis

### A WennSoft Solution:

#### TRANSPORTATION

Streets  
Signs  
Bridges  
Curb & Gutter  
Sidewalks

#### WATER

Pressurized Mains  
Valves  
Hydrants  
Pumps  
Pump Stations  
Meters

#### WASTEWATER/ STORM SEWER

Manholes  
Pipes  
Catch Basins  
Inlets  
Meters

#### ELECTRIC

Generators  
Transmission Lines  
Substations  
Switch Boxes  
Towers & Poles  
Service lines  
Meters

#### PARKS & RECREATION

Restrooms  
Playground Equipment  
Bike Racks  
Ball fields

#### FLEET

Construction Equipment  
Trucks  
Vehicles
